

Technology, Globalization and Sustainable Development

Transforming the Industrial State

By **Nicholas A Ashford** and **Ralph P Hall**

Technology, Globalization and Sustainable Development offers a unified, trans-disciplinary approach for transforming the industrial state in order to promote sustainable development. The authors present a deep analysis of the ways that industrial states – both developed and developing – are currently unsustainable and how economic and social welfare are related to the environment, to public health and safety, and to earning capacity and meaningful and rewarding employment. This book is essential reading for those teaching and studying sustainable development and the critical roles of the economy, employment, and the environment.
